**Reasons For Allowance**

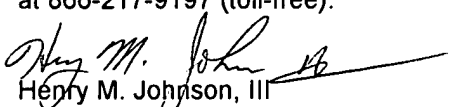

The prior art of record does not disclose or fairly suggest an ophthalmic laser apparatus with a unit for detecting the sound produced during an ablation process and a unit to derive the dryness of treated corneal tissue based on the collected sound. Prior art has disclosed the presence of acoustic shock waves during laser corneal processes. U.S. Patent 5,738,677 to Colvard teaches the use of acoustical shock waves in a laser process. U.S. Patent 5,190,006 to Klopotek discloses the use of acoustics to measure tissue depth or thickness. Neither discloses measuring the sound or using such measurement in a laser procedure. Jean et al. in "Noncontact photoacoustic spectroscopy during photoablation with a 193-nm excimer laser", teach a relation between ablation diameters and photoacoustic spectroscopy, but do not discuss any relation to moisture content.
